

## Plant Maintenance

*If your plant doesn't have the expertise on staff... contract our Millwrights and other trades to implement and support a maintenance plan at your facility.*

### Our Differentiator

As a company that designs and builds custom automation, we employ highly skilled, intelligent trades' people. We rely on our skilled trades to solve problems by not just looking at the symptoms, but seeing through them to see the root cause. They work at the design level to understand, troubleshoot and build robust equipment. It has become our culture to figure out how to do it better and not accept status quo.

### Maintenance Program

- Establish database for plant equipment
- Provide maintenance software to manage your process
- Establish list of work orders that need immediate attention
- Perform work orders as approved by you
- Compile recommended spare parts list
- Parts purchasing and/or follow up
- Establish a schedule of periodic maintenance for all plant equipment

### Available Opportunities through Steelworks

- Our full machine shop is available for the millwright to use as required.
- Larger installations requiring several trades people or multi-disciplinary trades may be completed.
- Equipment upgrades or improvements may be completed leveraging Steelworks engineering and design capabilities.
- On-site personnel are able to work as many or as few hours weekly as required.
